INTRODUCTION

What is IV Drip Therapy?

Intravenous (IV) Drip Therapy is a medical wellness treatment where fluids, vitamins, minerals, amino acids, and other nutrients are delivered directly into the bloodstream through a vein. This method allows your body to absorb the nutrients faster and more efficiently than if taken orally, with nearly 100% absorption.

How Does It Work?

When you take supplements or vitamins by mouth, only about 20-30% of the nutrients may be absorbed due to digestion. IV therapy bypasses the digestive tract and delivers nutrients straight into the bloodstream, providing your body with the immediate tools it needs to restore hydration, balance deficiencies, boost energy, and enhance healing.
